

UX Case Study

Daily Task Manager App

-B.Shashi Nayak

1. Project Overview

Objective

Design a minimalist mobile application that enables users to quickly capture, organize, and track daily tasks without the friction of complex features. The application focuses on simplicity, speed, and ease of use, helping users remain productive while minimizing cognitive overload.

2. User Research Summary

Modern users, particularly students and young professionals, often feel overwhelmed by productivity tools that contain excessive features and require a steep learning curve.

Secondary research suggests that users frequently abandon task management applications when:

- The interface becomes cluttered and difficult to navigate.
- Adding a simple task requires multiple steps or excessive taps.
- Important tasks are buried under unnecessary features.
- The overall experience feels complicated rather than helpful.

The primary goal of this application is to provide a **frictionless and intuitive experience** where users can:

- Quickly create tasks.
- Organize them by priority or category.
- Easily identify urgent work.
- Experience satisfaction by marking tasks as completed.

3. User Persona

Name :	Shashi
Age :	20 Years
Occupation :	Engineering Student

3.1. Bio

Shashi balances a heavy academic workload, internships, and personal projects. He relies on his smartphone for scheduling but often misses small tasks due to his current app's unstructured and messy interface.

3.2. Goals

- Add and categorize tasks (University, Personal, Internship) in under 5 seconds.
- Spot high-priority items instantly.
- Track progress and feel accomplished via a clear "completed tasks" view.

3.3. Frustrations

- Cluttered interfaces causing cognitive overload.
- Feature bloat (e.g., mandatory due dates, complex tagging, endless submenus).
- Inability to see urgent tasks at a quick glance.

4. Key Design Requirements

Based on the research findings and user persona, the application should:

1. Provide a clean and distraction-free interface.
2. Allow task creation with minimal user effort.
3. Support simple categorization and prioritization.
4. Clearly distinguish completed and pending tasks.
5. Maintain fast performance and intuitive navigation.

5. User Flow

Core Action: Adding a new task and marking it as complete.

1. Launch App: User opens the app and lands on the Home Screen.
2. Initiate Action: User taps the prominent "+" (Floating Action Button) at the bottom.
3. Input Details: A clean "Add Task" modal/screen slides up. User types the task name and selects a category (e.g., University).
4. Save Task: User taps "Save". The modal closes, returning the user to the Home Screen with the new task visible at the top of the list.
5. Complete Task: User taps the empty circle (checkbox) next to the task. The task strikes through and moves to the "Completed" section.

6. Low-Fidelity Wireframes

6.1. Home/Dashboard

6.2. Add Task Screen

6.3. Completed Tasks Screen

6.4. Settings Screen

7. High-Fidelity Wireframes

High-fidelity designs showcasing a modern dark mode aesthetic with deep red accents for clear call-to-action buttons.

7.1. Home/Dashboard

7.2. Add Task Screen

7.3. Completed Tasks Screen

7.4. Settings Screen

8. Conclusion and Key Learnings

Designing this Daily Task Manager provided hands-on experience in the complete UI/UX lifecycle. By starting with a clear user persona and defining core pain points, I was able to focus the user flow on simplicity and speed. Transitioning from low-fidelity wireframes to high-fidelity mockups reinforced the importance of visual hierarchy, contrast, and modern aesthetic choices. Specifically, utilizing a dark mode theme with strategic deep red color accents helped guide the user's eye toward key actions, like adding or saving a task. Ultimately, this project successfully demonstrates how a minimalist, user-centric approach can resolve the friction often found in complex productivity apps.
